Preface	25
CHAPTER 1 – Circles of Disease Transmission	27
Magdalena Dunowska	27
1 Introduction	28
2 Common steps in transmission of infectious agents	29
2.1 Entry	33
2.2 Incubation period	33
2.3 Spread within the body	34
2.4 Disease	35
2.5 Exit	36
3 Pathways of pathogen transmission	37
3.1 Main routes	37
3.2 Descriptive terms	42
4 Factors affecting the spread of pathogens within populations	48
4.1 The pathogen	49
4.2 The host	50
4.3 The environment	52
5 Summary	53
CHAPTER 2 – General principles of biosecurity in animal production and veterinary medicine	63
Jeroen Dewulf – Filip Van Immerseel	63
1 What is biosecurity?	64
2 Why is biosecurity important?	64
3 Biosecurity and disease transmission	65
4 The principles of biosecurity	66
4.1 Separation of high- and low-risk animals and environments	66
4.2 Reduction of the general infection pressure	67
4.3 Not all transmission routes are of equal importance	67
4.4 Risk is a combination of probability of transmission and frequency of occurrence of transmission routes	68
4.5 Larger animal groups pose higher risks	68

5	The components of biosecurity	69
5.1	External biosecurity	69
5.2	Internal biosecurity	73
6	Conclusions	75

CHAPTER 3 – Biosecurity and its relationship with health, production and antimicrobial use

	Merel Postma – Jeroen Dewulf	77
1	Introduction	78
2	Biosecurity and health	78
3	Biosecurity and production	81
4	Biosecurity and antimicrobial use	83
5	Economic impact of improved biosecurity	87
6	Conclusions	88

CHAPTER 4 – How to motivate farmers to implement biosecurity measures

	Lucie Collineau – Katharina D.C. Stärk	95
1	Introduction	96
2	Principles of the Theory of Planned Behaviour	97
3	Farmers' attitude towards the implementation of biosecurity measures	99
3.1	Perceived risk of disease occurrence	99
3.2	Perceived cost-effectiveness of biosecurity measures	100
4	Subjective norm	101
4.1	Perceived influence from governments and research institutions	102
4.2	Perceived influence of veterinarians, farm advisors and peer farmers	104
5	Perceived behavioural control	105
5.1	Influence of the farm's financial circumstances	106
5.2	Feasibility of biosecurity measures	107
6	Practical recommendations	108

CHAPTER 5 – How to measure biosecurity and the hygiene status of farms	115
Jeroen Dewulf – Merel Postma – Filip Van Immerseel – Bo Vanbeselaere – Kaat Luyckx	115
1 Introduction	116
2 How to measure on-farm biosecurity	116
3 How to measure hygiene status	121
3.1 Bacteriological monitoring	122
3.2 Adenosine triphosphate (ATP) hygiene monitoring	124
3.3 Visual inspection	124
3.4 Aspects to consider when monitoring the efficacy of C&D on farms	126
4 Conclusion	127
CHAPTER 6 – Cleaning and disinfection	133
Filip Van Immerseel – Kaat Luyckx – Koen De Reu – Jeroen Dewulf	133
1 Introduction	134
2 Practical aspects of cleaning and disinfection: a general protocol	134
2.1 Cleaning and disinfection procedure	134
2.2 Cleaning products	139
2.3 Disinfectants	142
2.4 Factors affecting efficacy of disinfectants	149
2.5 Resistance to disinfectants	152
3 Conclusion	154
CHAPTER 7 – Hygienic aspects of air and decontamination of air	159
Steven J. Hoff	159
1 Introduction	160
2 Air as a disease transmission vector	160
3 Aerosol size and physical capture and non-contact virus destruction considerations	164
4 Methods and system design for aerosol capture	169
5 Summary	172
Acknowledgements	173

CHAPTER 8 – Feed Hygiene	177
Steven C. Ricke	177
1 Introduction	178
2 Feed microbial ecology	178
3 Feed Contamination	179
3.1 Overview	179
3.2 Bacteriophage	180
3.3 Fungi	181
3.4 Bacteria	182
4 Feed Hygiene Practices – Physical	187
4.1 Overview	187
4.2 Thermal	188
5 Feed Hygiene Practices – Chemical and Biological Additives	189
5.1 Overview	189
5.2 Essential Oils and Related Botanicals	190
5.3 Acids	190
5.4 Aldehydes	192
6 Detection and Analyses	193
6.1 Overview and the Issue of Sampling	193
6.2 Cultural Growth-Based Methods	194
6.3 Molecular-Based Methods	195
6.4 Indicator Organisms	197
6.5 Future Detection Approaches – Feed Microbiome	198
7 Feed Hygiene Management	200
8 Conclusions	203
 CHAPTER 9 – Drinking Water Hygiene and Biosecurity	 211
Andrew Olkowski	211
1 Introduction	212
2 Drinking Water Hygiene	213
3 Significance of Water Hygiene in the Contemporary Animal Industry	214
4 Chemistry of Drinking Water	215
5 Impact of Contaminants on Water Intake and Physiology	216
6 Biosecurity Aspect of Drinking Water Contaminants	217
6.1 Mineral Chemical Contaminants	218

6.2	Biologically Active Chemical Contaminants	219
6.3	Immunomodulatory Compounds	220
6.4	Antimicrobial Agents	221
6.5	Biological Contaminants	222
6.6	Significant Zoonotic Pathogens Associated with Drinking Water	225
7	Evaluating Drinking Water Safety	227
7.1	Water Analyses	228
8	Risk Associated with Drinking Water Contaminants	230
9	Water Biosecurity and Risk Management	232
10	Water Treatment	233
10.1	Water Sanitation	235
10.2	Practical Approach to Drinking Water Hygiene	237
CHAPTER 10 – Promoting Biosecurity through Insect Management at Animal Facilities		243
Alec C. Gerry – Amy C. Murillo		243
1	Introduction	244
2	Damage caused by insects	244
2.1	Insects and animal disease	245
2.2	Insects and biosecurity	246
2.3	Integrated pest management	247
3	Insect pests of cattle	249
3.1	Permanent ectoparasites	250
3.2	Ticks	251
3.3	Cattle grubs and screwworm flies	252
3.4	Flies that develop in cattle faecal pats	253
3.5	Flies that develop in fermenting organic matter	255
3.6	Biting midges	258
3.7	Biosecurity for cattle pests	259
4	Insect pests of sheep	260
4.1	Permanent ectoparasites	260
4.2	Ticks	261
4.3	Sheep bot fly	261
4.4	Wool maggots	262
4.5	Biting midges	262
4.6	Biosecurity for sheep pests	263
5	Insect pests of swine	263

5.1	Permanent ectoparasites	263
5.2	Ticks and fleas	264
5.3	Flies and mosquitoes	265
5.4	Biosecurity for swine pests	266
6	Insect pests of horses	266
6.1	Permanent ectoparasites	267
6.2	Ticks	267
6.3	Bot flies	267
6.4	Flies and mosquitoes	268
6.5	Biosecurity for horse facilities	269
7	Insect pests of poultry	270
7.1	Permanent ectoparasites	270
7.2	Nest parasites	272
7.3	Insects that develop in poultry faeces and litter	273
7.4	Biosecurity for poultry pests	275
8	Conclusion	276
CHAPTER 11 – Rodent control in animal production		283
Trees Loncke – Jeroen Dewulf		283
1	Introduction	284
2	Rodents and the reasons for their success	285
3	Monitoring: how to identify a rodent problem?	286
4	How to control rodents	288
4.1	Preventing the entrance of the rodents	288
4.2	Control of rodents inside the animal houses	289
5	When to control rodents	292
6	Conclusions	293
CHAPTER 12 – Transmission of pig diseases and biosecurity in pig production		295
Jeroen Dewulf – Merel Postma – Bo Vanbeselaere – Dominiek Maes – Maria Eleni Filippitzi		295
1	Introduction	296
2	Review of pig disease transmission	297
3	Biosecurity measures in pig production	302
3.1	External Biosecurity	302
3.2	Internal Biosecurity	312
4	Conclusions	319

CHAPTER 13 – Transmission of poultry diseases and biosecurity in poultry production	329
Hilde Van Meirhaeghe – Anna Schwarz – Jeroen Dewulf – Filip Van Immerseel – Bo Vanbeselaere – Maarten De Gussem	329
1 Introduction	330
1.1 Poultry production	330
1.2 Disease transmission: horizontal and vertical	331
2 General biosecurity principles	333
2.1 Geographical location of the poultry farm	333
2.2 Structural layout of the poultry farm and buildings	334
2.3 Potential sources of infection and operational flow on the farm	336
2.4 Cleaning and disinfection protocols for poultry	339
2.5 Water quality in poultry houses	340
3 Biosecurity aspects that are specific to the different production systems	341
3.1 Breeders	341
3.2 Production farms: broilers	342
3.3 Production farms: layers	343
4 Biosecurity in hatcheries	344
4.1 Hatchery management from egg to chick	344
4.2 Disease transmission in hatcheries	346
4.3 Hygiene and biosecurity in hatcheries	346
CHAPTER 14 – Transmission of cattle diseases and biosecurity in cattle farms	357
Steven Sarrazin – Bert Damiaans – Véronique Renault – Claude Saegerman	357
1 Introduction	358
2 Outline of the cattle industry	359
3 Transmission of cattle diseases	360
4 Biosecurity in cattle farms	360
4.1 External biosecurity	361
4.2 Internal biosecurity	369

CHAPTER 15 – Biosecurity for Horse Facilities	409
J. Scott Weese	409
1 Introduction	410
2 Biosecurity challenges in the equine industry	410
3 Principles of biosecurity applied to horses	411
3.1 Reducing exposure	411
3.2 Reducing susceptibility	412
3.3 Increasing resistance	412
4 Biosecurity considerations for equine facilities and personnel	413
4.1 Risk assessment	414
4.2 Quarantine	414
4.3 Cohorting	416
4.4 Zoning	416
4.5 Access management	418
4.6 Isolation	418
4.7 Syndromic surveillance	419
4.8 Active surveillance	420
4.9 Event attendance procedures	421
4.10 Personal hygiene	422
4.11 Cleaning and disinfection	422
4.12 Surface materials	424
4.13 Manure management	425
4.14 Pasture management	426
4.15 Transportation	427
4.16 Personnel	428
4.17 Auditing	428
4.18 Communication	429
 CHAPTER 16 – Biosecurity measures for dog merchants and canine breeding kennels	 433
Pierre-Alexandre Dendoncker – Hilde de Rooster – Eline Abma – Eline Wydooghe – Jeroen Dewulf	433
1 Introduction	434
2 General Biosecurity Guidelines	434
2.1 External biosecurity	435
2.2 Internal biosecurity	441
3 Conclusion	448

CHAPTER 17 – Biosecurity in veterinary practices and clinics	453
Claude Saegerman – Marie-France Humblet	453
1 Introduction	454
2 General principles of biosecurity applicable to veterinary clinics/practices	454
3 How to implement biosecurity in a veterinary practice/clinic – case-study #1: dog with methicillin-resistant <i>Staphylococcus aureus</i>	462
3.1 Patient care	462
3.2 Personal protection when handling the patient	463
3.3 Management of premises	464
3.4 Equipment and materials	464
3.5 Waste management	465
4 How to implement biosecurity in a veterinary practice/clinic – case-study #2: horse with salmonellosis	465
4.1 Patient care	466
4.2 Personal protection	466
4.3 Premises – isolation unit	468
4.4 Equipment and material	468
4.5 Waste management	469
5 Biosecurity audits – internal audit	469
6 Biosecurity and veterinary education	469
7 Conclusion	471

CHAPTER 18 – Biosecurity in Laboratory Animal Research Facilities	475
Patty H. Chen – Robin Trundy	475
1 Biosecurity & the lab animal holding facility	476
2 Animal acquisition considerations	478
3 Maintaining biosecurity in the facility	479
4 Health monitoring programme considerations	480
5 Biosecurity & animal research activities	483
6 Biological material risk considerations	483
7 Procedure-related hazards & hazard control	485
8 Biosafety/Biocontainment levels & principles	487

9	Human factors impacting biocontainment	491
10	Animal biosecurity: preventive medicine and research biocontainment partnership	493

CHAPTER 19 – Biosecurity in aquaculture: Practical veterinary Approaches for Aquatic animal disease Prevention, control, And potential Eradication

	Dušan Palić – A. David Scarfe	497
1	Introduction	498
1.1	Disease ‘Management’ vs. Disease Prevention, Control and Eradication	499
1.2	The Epidemiological Unit – the Focus of All Biosecurity Activities	501
1.3	Expanding the Process for Larger Units in a Country (Compartmentalisation and Zoning)	501
2	The IAVBC Process Applied to Developing Biosecurity Plan on Individual Farms	501
2.1	Teamwork in Developing and Implementing Biosecurity Programmes	502
2.2	Identifying, Prioritising and Determining the Impact of Hazardous Diseases for the Biosecurity Plan	505
3	Identifying, Prioritising and Mitigating Critical Points Where Disease can Enter or Leave an Epidemiological Unit	507
4	Developing a Contingency Plan if Disease is Found	509
5	Determining if Priority Diseases (Hazards) are Present using Clinical Evaluation and Diagnostic Tests	511
6	Maintaining Biosecurity – Surveillance, Monitoring and Keeping Records	513
7	Veterinary Auditing and Certification for Freedom from Disease and Achieving Government Recognition	515
8	A Way Forward for Aquaculture to Meet International (OIE) and National Biosecurity Requirements	516
	Acknowledgements	520
