Preface	39
<i>Johan Verbraecken</i>	
PART I BASIC ASPECTS OF WAKING AND SLEEPING	41
1 Neurobiology of sleep and waking	43
1.1 Introduction	44
1.2 Neuronal control of wakefulness	44
1.2.1 Cholinergic transmission	45
1.2.2 Monoaminergic transmission	45
1.2.3 Orexins	46
1.3 Neuronal control of the sleep state	47
1.4 Neuronal control of NREM/REM sleep	48
1.5 Steering the sleep-wake mechanism	49
1.5.1 Homeostatic factor	49
1.5.2 Neurobiological basis for the C-factor	49
1.6 Conclusion	50
Literature	51
2 Regulation of the circadian rhythm	53
2.1 Introduction	54
2.2 Biological clock in the suprachiasmatic nucleus	54
2.3 Synchronisation	55
2.4 SCN transplantations	56
2.5 Rhythm in physiology and behaviour	56
2.6 Sleep and wake as biological rhythm	57
2.7 Conclusion	59
Literature	59

3	Physiology of breathing during sleep	61
3.1	Control of breathing during wakefulness and sleep	62
3.1.1	Introduction	62
3.1.2	Breathing during wakefulness	63
3.1.3	Breathing during sleep	64
3.1.4	Disturbed breathing during sleep	66
3.2	Anatomy and function of the upper airways	66
3.2.1	Introduction	66
3.2.2	Normal anatomy of the upper airways	66
3.2.2.1	Normal anatomy of the nose	67
3.2.2.2	Normal anatomy of the pharynx	68
3.2.2.3	Normal anatomy of the larynx	69
3.2.3	Function of the upper airways	70
3.2.3.1	Function of the nose	70
3.2.3.2	Function of the pharynx	70
3.2.3.3	Function of the larynx	70
3.3	Respiratory mechanics and ventilation	70
3.3.1	Introduction	70
3.3.2	Ventilation during sleep	71
3.3.2.1	Measurement	71
3.3.2.2	Minute ventilation	71
3.3.3	Association between thoracic and abdominal breathing	71
3.3.3.1	Normal and paradoxical breathing	71
3.3.3.2	Thoracic and abdominal breathing during NREM sleep	72
3.3.3.3	Thoracic and abdominal breathing during REM sleep	73
3.3.3.4	Airway resistance	74
3.3.3.5	Functional residual capacity	74
	Literature	75
4	Autonomic and cardiovascular regulation	77
4.1	Introduction	78
4.2	The autonomic nervous system and circulation	78
4.2.1	Efferent pathways of the autonomic nervous system	78
4.2.1.1	Circulatory effects of the sympathetic nervous system	78
4.2.1.2	Circulatory effects of the parasympathetic nervous system	79
4.2.2	Afferent pathways of the autonomic nervous system	80
4.3	Heart rate variability	81
4.4	Circulation during NREM sleep	81
4.5	Circulation during REM sleep	82
4.6	Conclusion	82
	Literature	83

5	Sleep and energy metabolism	85
5.1	Introduction	86
5.2	Regulation of energy management	86
5.3	Effect of sleep and circadian rhythm on energy metabolism	87
5.4	Effect of disturbed sleep on energy management	88
5.5	Sleep disorders and energy metabolism	89
5.6	Conclusion	90
	Literature	90
6	Thermoregulation during sleep	91
6.1	Introduction	92
6.2	Regulation of body temperature	92
6.3	Falling asleep and waking up	93
6.4	Manipulating sleep with temperature	93
6.5	Clinical relevance	94
	Literature	95
7	Sleep across the lifespan	97
7.1	Introduction	98
7.2	Sleep in newborns and in the first year of life	98
7.3	Sleep in young children	105
7.4	Sleep in teenagers and adolescents	105
7.5	Further development of sleep and sleep phases in adults	106
7.6	Sleep at an older age	110
	7.6.1 Changes in sleep and wakefulness in older individuals	110
	7.6.2 Changes in the organisation of the sleep microstructure with ageing	111
	Literature	111
8	Sleep and the immune system	113
8.1	Introduction	114
8.2	Role of the immune system in sleep regulation	114
	8.2.1 Sleep-regulating cytokines	114
	8.2.2 Sleep-modulating cytokines	115
	8.2.3 Effect of infection and inflammation on sleep	115
8.3	Impact of sleep and sleep deprivation on immunity	115
	8.3.1 Impact of sleep on immunity	115
	8.3.2 Sleep deprivation and immunity	116
	8.3.2.1 Effects of total sleep deprivation	116
	8.3.2.2 Effect of sleep restriction	116

8.4	Sleep disorders and immune function	117
8.4.1	Obstructive sleep apnoea syndrome (OSAS)	117
8.4.2	Insomnia	117
8.4.3	Narcolepsy	117
8.5	Conclusion	117
	Literature	118
9	Sleeping to learn	119
9.1	Introduction	120
9.2	Sleep and the reactivation of memory traces	120
9.3	Effects of sleep on memory	120
9.4	Effects of sleep on subsequent learning	121
9.5	Sleep and the acquisition of new insights	122
9.6	Sleep and emotions	122
9.7	conclusion	123
	Literature	123
10	Sleep and genetics	125
10.1	Introduction	126
10.2	Genetics and normal sleep	126
10.2.1	The timing of sleep	126
10.2.2	Sleep duration and architecture	127
10.2.3	Electroencephalograms	128
10.3	Sensitivity to medication	128
10.4	Perspective	128
	Literature	129
PART II	DIAGNOSTIC TECHNIQUES	131
11	Polysomnography	133
11.1	Sensors and measurement techniques	136
11.1.1	Introduction	136
11.1.2	Sleep	136
11.1.3	Breathing	137
11.1.4	Respiratory effort	137
11.1.5	Respiratory sounds	138
11.1.6	Oximetry	138
11.1.7	Oesophageal pressure and PTT	139
11.1.8	Capnography and blood gases	139
11.1.9	ECG and blood pressure	139
11.1.10	Leg movements	140
11.1.11	Technical channels	140

II.1.12	Video registration	140
II.1.13	Other signals	140
II.2	Equipment, sampling frequency, filters and calibration	141
II.2.1	Introduction	141
II.2.2	Sampling frequency and filter settings	141
II.2.3	Interference	143
II.2.4	Aliasing	143
II.2.5	Calibration	144
II.3	Electrode placement	145
II.3.1	Introduction	145
II.3.2	Electroencephalography (EEG)	145
II.3.2.1	Determining the location	145
II.3.2.2	Attaching the electrodes	147
II.3.3	EEG in a polysomnography	148
II.3.4	Electro-oculogram (EOG)	150
II.3.5	Electromyogram (EMG) of the chin musculature	151
II.3.6	Electromyogram (EMG) of the limbs	152
II.3.7	Electrocardiogram (ECG)	153
II.4	Scoring sleep EEG in accordance with the AASM rules (2007)	153
II.4.1	Introduction	153
II.4.2	History	154
II.4.3	Terminology	154
II.4.3.1	Bandwidth frequency	154
II.4.3.2	Sporadic occurrence of waves in a sleep stage	155
II.4.3.3	Sleep stages	156
II.4.3.4	The principle of epochs	157
II.4.4	Characteristics of sleep stages and scoring rules	157
II.4.4.1	Stage W (wakefulness) (figure II.14)	157
II.4.4.2	Stage N1 (figure II.15)	158
II.4.4.3	Stage N2 (figure II.16)	158
II.4.4.4	Stage N3 (figure II.20)	161
II.4.4.5	REM stage (figures II.21 and II.22)	162
II.4.5	Major body movements	167
II.4.6	EEG arousals	168
II.5	Scoring respiration according to the AASM (last version 2.5, 2018)	168
II.5.1	Measuring airflow and respiratory effort	168
II.5.2	Definitions	170
II.5.2.1	Apnoea	170
II.5.2.2	Hypopnoea	172
II.5.2.3	RERA	173
II.5.2.4	Hypoventilation	173
II.5.2.5	Cheyne-Stokes respiration	173
II.5.3	Report	177

11.6	Scoring leg movements	177
11.6.1	Introduction	177
11.6.2	Registration of leg movements	178
11.6.3	Diagnostic criteria and scoring rules	178
11.6.4	Reporting leg movements	179
11.6.5	Alternative scoring rules	179
11.7	Periodic leg movements in sleep-related breathing disorders	180
11.7.1	Periodic leg movements and breathing events	180
11.7.2	Respiratory events and movements previously identified as 'body movements'	182
11.7.3	Respiration in REM Sleep Behaviour Disorder	183
11.8	Evaluation of the ECG	183
11.8.1	Introduction	183
11.8.2	Normal parameters (table 11.8)	184
11.8.2.1	Heart rhythm	185
11.8.2.2	Conduction times	185
11.8.3	Terminology	186
11.8.4	Some frequency rhythm disorders during polygraphy/polysomnography	187
11.9	Indications for polysomnography	189
11.9.1	Introduction	189
11.9.2	Sleep-related breathing disorders	189
11.9.2.1	Indications for PSG	190
11.9.2.2	Minimum technical requirements for a PSG for sleep-related breathing disorders	191
11.9.2.3	Reporting PSG	191
11.9.3	Narcolepsy	191
11.9.3.1	Minimum technical requirements for PSG to diagnose narcolepsy	191
11.9.3.2	Parasomnias and epileptiform seizures	191
11.9.3.3	Restless leg syndrome and periodic limb movement disorder	192
11.9.4	Depression-related insomnia	192
11.9.5	Circadian rhythm sleep-wake disorders	193
11.9.6	Conclusion	193
11.10	Reporting video polysomnography	193
11.10.1	Introduction	193
11.10.2	Elements of the video PSG report	194
11.10.2.1	General data	195
11.10.2.2	Sleep-scoring data	196
11.10.2.3	Arousal events	196
11.10.2.4	Cardiac events	197
11.10.2.5	Movement events	197

	II.10.2.6 Respiratory events	197
	II.10.2.7 Summarising comments	199
	II.10.3 Conclusion	201
II.11	Ambulatory PG/PSG	202
	II.11.1 Introduction	202
	II.11.2 Advantages of clinical PSG	202
	II.11.3 Equipment for PG/PSG versus the gold standard	203
	II.11.4 Why/why not ambulatory PG/PSG?	204
	II.11.5 Indications for ambulatory polygraphy: international guidelines	205
	II.11.5.1 Low or high pre-test probability of sleep apnoea	205
	II.11.5.2 Additional prerequisites	205
	II.11.5.3 Other indications for sleep apnoea	205
	II.11.5.4 Polygraphy: limitations of the available evidence	206
	II.11.5.5 Contraindications for polygraphy	206
	II.11.5.6 Methodological recommendations	206
	II.11.5.7 Equipment of choice	207
	II.11.6 Conclusion	208
II.12	Respiratory sounds during sleep	208
	II.12.1 Introduction	208
	II.12.2 Respiratory sounds during inspiration	209
	II.12.2.1 Snoring	209
	II.12.2.2 Stridor	211
	II.12.3 Expiratory respiratory sound: catathrenia	213
	Literature	216
12	Assessment of daytime sleepiness	219
12.1	Introduction	220
12.2	MSLT	220
	12.2.1 Introduction	220
	12.2.2 MSLT protocol	220
	12.2.3 Clinical use of MSLT, reliability and standard data	221
12.3	Maintenance of Wakefulness Test (MWT)	222
	12.3.1 Origin and use of the MWT	222
	12.3.2 Administrating the test	222
	12.3.3 Normative data for adults	224
	12.3.4 Clinical use of the MWT	224
	12.3.5 Conclusion	225
12.4	Driving simulation	225
	12.4.1 Introduction	225
	12.4.2 Evaluation instruments for problematic sleepiness: driving simulators, self-reporting and objective measurements	226
12.5	Computerised vigilance tasks	228

12.5.1	Vigilance tasks	228
12.5.1.1	Mackworth Clock Test (MCT)	228
12.5.1.2	Psychomotor vigilant task (PVT)	229
12.5.1.3	Oxford Sleep Resistance Test (OSLER)	229
12.5.1.4	Sustained Attention to Response Task (SART)	230
12.5.2	Clinical use and standard data	230
	Literature	231
13	Cardiorespiratory monitoring during sleep	235
13.1	Polygraphy scoring: settings, patterns and pitfalls	236
13.1.1	Introduction	236
13.1.2	Home registration and pros and cons of polygraphy	237
13.1.3	Settings and scoring	237
13.1.4	Automatic and manual scoring	238
13.1.5	Patterns and pitfalls	238
13.1.6	Reproducibility and repeated registrations	238
13.1.7	Report	239
13.2	Interpreting cardiorespiratory polygraphy	239
13.2.1	Introduction	239
13.2.2	Technical aspects and localisation	239
13.2.3	Assessing a PG	240
13.2.4	Summary	240
13.3	Oximetry	240
13.3.1	Introduction	240
13.3.2	Technical aspects	240
13.3.3	Using oximetry to diagnose sleep-related breathing problems	241
13.3.4	Conclusion	243
	Literature	243
14	Actigraphy	245
14.1	Introduction: general principles and history	246
14.2	Measurement method and interpretation of an actogram	246
14.3	Clinical use and interpretation	248
14.4	Conclusion	250
	Literature	250
15	Evaluation of arousals	251
15.1	Detection techniques for arousals, including PTT and PAT	252
15.1.1	Introduction	252
15.1.2	What are arousals?	252
15.1.3	Why is it important to recognise arousals?	252

15.1.4	Recognising arousals	253
	15.1.4.1 Cortical arousals	253
	15.1.4.2 Autonomic arousals	253
15.1.5	Conclusion	258
15.2	Evaluation of arousals: clinical aspects	258
15.2.1	Arousal transitional phenomenon between sleep and wake	258
15.2.2	Why do arousals occur?	259
15.2.3	Frequent aetiologies of arousals	260
	15.2.3.1 Arousals in the spectrum of sleep disorders	260
	15.2.3.2 Obstructive pulmonary conditions	261
	15.2.3.3 Fibromyalgia	261
15.2.4	Arousals: normal values	261
15.2.5	Arousals as an outcome parameter	262
15.2.6	Alpha sleep and alpha-delta pattern	262
15.3	Scoring arousals and CAP	263
15.3.1	Introduction	263
15.3.2	Arousals and sleep scores	263
15.3.3	Arousals related to movement and breathing	264
15.3.4	Parameters in reporting PSG	264
15.3.5	Reliability	265
15.3.6	Correlated findings in PSG	265
15.3.7	CAP	265
	Literature	267

16 Advanced measurement techniques during sleep **269**

16.1	Introduction	271
16.2	Sleep endoscopy	271
	16.2.1 Introduction	271
	16.2.2 Indication	271
	16.2.3 Technique	272
	16.2.4 Classification for upper airway obstruction in sleep endoscopy	273
	16.2.5 Structures of the VOTE classification	273
	16.2.6 Severity of collapse	274
	16.2.7 Phenotypes of collapse patterns	274
	16.2.8 Conclusion	275
16.3	Imaging of the upper airways in patients with sleep-related breathing disorders	275
	16.3.1 Introduction	275
	16.3.2 Imaging techniques	276
	16.3.2.1 Cephalometry	276
	16.3.2.2 Video endoscopy of the upper airways	278
	16.3.2.3 Reflectometry and FOT	279

16.3.3	Conclusion	280
16.4	Forced oscillation technique during sleep	280
16.4.1	Introduction	280
16.4.2	Principle of FOT	280
16.4.3	Administering FOT during sleep	283
16.5	Capnography during sleep	288
16.5.1	Introduction	288
16.5.2	End-tidal capnography	288
16.5.2.1	Principles	288
16.5.2.2	The various phases of a capnogram	289
16.5.2.3	Equipment (capnograph) and disposables for end-tidal capnography	289
16.5.2.4	Association between end-tidal and arterial PCO ₂	290
16.5.3	Transcutaneous capnography	290
16.5.4	Identifying hypoventilation	291
16.6	Video registration in sleep research	291
16.6.1	Introduction	291
16.6.2	Technology	292
16.6.3	Conclusion	293
16.7	Techniques for pathophysiological phenotyping in sleep apnoea	293
16.7.1	Introduction	293
16.7.2	Pathophysiological phenotyping using CPAP pressure drops	293
16.7.2.1	Collapsibility of the upper airways (Pcrit)	294
16.7.2.2	Ventilatory control sensitivity (loop gain)	296
16.7.2.3	Muscular responsiveness	296
16.7.2.4	Arousal threshold (waking threshold)	297
16.7.3	Pathophysiological phenotyping using diagnostic polysomnography signals	299
16.7.3.1	Location of the upper airway collapse	299
16.7.3.2	Collapsibility of the upper airways (Pcrit)	299
16.7.3.3	Ventilatory control sensitivity (loop gain)	300
16.7.3.4	Muscular responsiveness	300
16.7.3.5	Arousal threshold (waking threshold)	300
Literature		301

PART III SLEEP DISORDERS 309

17	Classification of sleep disorders	311
17.1	Introduction	312
17.2	Insomnia	312
17.3	Sleep-related breathing disorders	313
17.4	Central hypersomnia	314

17.5	Circadian rhythm sleep-wake disorders	315
17.6	Parasomnias	315
17.7	Sleep-related movement disorders	316
17.8	Other sleep disorders	316
17.9	Conclusion	316
	Literature	317
18	Insomnia	319
18.1	Chronic insomnia disorder	321
18.1.1	Introduction	321
18.1.2	Definitions	321
18.1.3	Epidemiology	324
18.1.4	Pathophysiological models	324
18.1.4.1	Behavioural model	324
18.1.4.2	Cognitive models	325
18.1.4.3	Neurobiological background	325
18.1.4.4	Integration of the various models and insights	326
18.1.5	Consequences	327
18.1.6	Diagnosis	328
18.1.7	Treatment	328
18.1.8	Conclusion	329
18.2	Insomnia in medical and psychiatric diseases	329
18.2.1	Introduction	329
18.2.2	Insomnia and medical diseases	330
18.2.2.1	Insomnia and cardiovascular conditions	330
18.2.2.2	Insomnia and endocrine disorders	330
18.2.2.3	Insomnia and cancer	330
18.2.2.4	Insomnia and neurological conditions	331
18.2.2.5	Insomnia and chronic pain, chronic fatigue syndrome and fibromyalgia	331
18.2.2.6	Insomnia and gastrointestinal conditions	332
18.2.2.7	Insomnia and genitourinary conditions	332
18.2.2.8	Insomnia and pulmonary conditions	333
18.2.3	Insomnia and psychiatric diseases	333
18.2.3.1	Insomnia and mood disorders	333
18.2.3.2	Insomnia and anxiety disorders	335
18.2.3.3	Insomnia and psychoses	337
18.2.4	Treatment	337
18.2.5	Conclusion	337
18.3	Sleep disorders in adults with ADHD	338
18.3.1	Introduction	338
18.3.2	Sleep disorders in adults with ADHD	338

18.3.3	Treatment of delayed sleep-wake phase with ADHD	341
18.3.3.1	Information and sleep hygiene	341
18.3.3.2	Melatonin in the delayed sleep-wake phase	343
18.3.3.3	Treatment of other sleep disorders with ADHD	343
18.4	Drug induced insomnia	344
18.4.1	Introduction	344
18.4.2	Sedatives	344
18.4.3	Recreational substances	344
18.4.4	Drugs used for neurological disorders	345
18.4.5	Drugs used in psychiatry	345
18.4.6	Drugs for cardiovascular disease	346
18.4.7	Drugs for pulmonary conditions	346
18.4.8	Drugs that can cause nightmares, vivid dreams and hallucinations	346
18.4.9	Conclusion	347
	Literature	347
19	Circadian rhythm sleep-wake disorders	351
19.1	Circadian rhythm sleep-wake disorders	352
19.1.1	Introduction	352
19.1.2	The biological clock, light and melatonin	353
19.1.3	Classification of circadian rhythm sleep-wake disorders (CRSWD)	353
19.1.3.1	Delayed sleep-wake phase disorder (DSWPD)	355
19.1.3.2	Advanced sleep-wake phase disorder (ASWPD)	357
19.1.3.3	Non-24-hour circadian rhythm sleep-wake disorder	358
19.1.3.4	Irregular sleep-wake pattern	359
19.1.4	Conclusion	360
19.2	Shift work and jet lag disorder	360
19.2.1	Introduction	360
19.2.2	Shift work and shift work disorder	360
19.2.2.1	Prevalence	361
19.2.2.2	Conditions of shift work	361
19.2.2.3	Consequences of shift work disorder	362
19.2.2.4	Measures	363
19.2.2.5	Recommendations	365
19.2.3	Jet lag disorder	366
19.2.3.1	Internal disassociation of rhythms	366
19.2.3.2	Counteracting jet lag disorder	368
19.2.4	Conclusion	368
	Literature	369

20 Treatment of insomnia and circadian rhythm sleep-wake disorders	371
20.1 Pharmacologic treatment of insomnia	372
20.1.1 Introduction	372
20.1.2 Hypnotics	372
20.1.2.1 First-generation hypnotics: enhancing CNS inhibition	372
20.1.2.2 Second-generation hypnotics: reduction of CNS excitation/hyperexcitation	375
20.1.2.3 Third-generation hypnotics: stabilisation of sleep	377
20.1.3 Pharmacologic treatment of insomnia as a comorbidity	378
